

No more manual drawing updates

Discover ProjectFiles by Part3—the AI-powered platform automating drawing updates, submittals, RFIs, and field reports for architects.

Have you ever spent hours exporting PDFs, combining documents, and emailing updated drawings to everyone on the team—only to realize someone's still working from the wrong version?

Us too.

The good news is that the AE industry finally has a fix.

If you haven't heard of [Part3](#), we're here to tell you a bit about this AI-powered construction administration platform built specifically for architects.

To solve one of the biggest drawing woes in our industry, Part3 just launched [ProjectFiles](#) – **an automation feature that keeps your drawing sets current without the manual busywork.**

ProjectFiles keeps your drawings current by linking updates from SIs, PCs, and RFIs to the right sheets—no manual combining or re-issuing. Because it's all housed in Part3, there's no need to upload files to Procore, ACC, SharePoint, or Dropbox. Everything—and everyone—stays in sync.

Why ProjectFiles matters?

- Minimizes risk
- Avoids human error
- Eliminates workflow gaps with automation

While ProjectFiles automates drawing management, the rest of the Part3 platform streamlines every stage of construction administration – from AI-powered submittal review with the [Submittal Assistant](#) to simplified RFIs, field reports, and change orders. **These tools help architects cut redundant steps, reduce admin time, and focus on what really matters: delivering great projects and lasting client relationships.**
